		"Creation and implementation of training for tourist guides"	Municipality of Komen	Members of the tourism sector	Any area with castles, fortifications or a similar type of architecture	Specific programs have been developed with the aim of training tourist guides. Those specific programs can be used by other actors to gain insights in what specific ways where those tourist guides trained and by using what resources.
Heritage-based tourism	RIDE&BIKEII	Defined RIDE&BIKE standards	Tourist Board Krapina-Zagorje County	"Actors interested in cycling and/or equestrian tourism"	Any (cross-border) rural area which is interested in cycling and/or equestrian tourism	Defined RIDE&BIKE standards can be used as a basis for developing standards for the tourism sector, for objects of cultural and natural heritage and for cycling and/or equestrian tourism in other areas.

Thematic area	Project	Capitalisation element	Responsible partner	Possible target groups for capitalisation	Possible geographical areas for capitalisation	Possible ways of capitalisation
Heritage-based tourism	Mala barka 2	Guidelines for the development of sustainable tourism on the topic of maritime heritage for the entire cross-border area Mala barka 2	County of Primorje and Gorski Kotar	Stakeholders directly involved in managing tourism offer at a specific area, representatives of the public and private tourism sectors, non-governmental organizations	Any coastal area with maritime heritage	"The guidelines contain recommendations from various actors (UN, UNEP, European Commission, local and regional authorities) in regards to the development of sustainable tourism which can then be used by other actors in other areas. These specific recommendations and measures can be useful to various other actors in coastal areas with maritime heritage."
		Development master plan of maritime tourism - Mala Barka 2	County of Primorje and Gorski Kotar	Stakeholders directly involved in managing tourism offer at a specific area, representatives of the public and private tourism sectors, non-governmental organizations	Any coastal area with maritime heritage	The master plan contains various strategies and practices which aim to effectively promote and market maritime heritage. Those strategies and practices can be used by other actors in other coastal areas with maritime heritage.
		Marketing plan	Kvarner Region Tourism Office	Representatives of the public and private tourism sectors, non-governmental organizations	Any coastal area with maritime heritage	The marketing plan contains all the goals, measures and activities which must be carried out as a part of a comprehensive promotional campaign. These specific goals, measures and activities will serve as an example of a good promotional and marketing campaign in regards to maritime heritage.
		Creation of a database of maritime heritage in Slovenia	Municipality of Izola	Museums, local and regional authorities, members of the tourism sector	Any coastal area with maritime heritage	The database will serve as an example of how to categorize and describe both intangible and tangible maritime heritage.
		Creation of a database of maritime heritage in Croatia	Municipality of Izola	Museums, local and regional authorities, members of the tourism sector	Any coastal area with maritime heritage	The database will serve as an example of how to categorize and describe both intangible and tangible maritime heritage.

Thematic area	Project	Capitalisation element	Responsible partner	Possible target groups for capitalisation	Possible geographical areas for capitalisation	Possible ways of capitalisation
Heritage-based tourism	ENJOYHERITAGE	State analysis	Institute of the Republic of Slovenia for Nature Conservation	Representatives of the public and private tourism sectors, non-governmental organizations	Any (cross-border) rural area with natural and cultural heritage	State analysis provides a general overview in regards to the management of visitors, the existing management system and the offer of natural and cultural heritage, both tangible and intangible, in the pilot areas. The analysis also includes an assessment of statistical data in regards to visits, overnight stays, indicators of resource consumption, as well as an analysis of the state of target areas of natural and cultural heritage. This analysis can serve as an example of what should be emphasized by other actors in their respective areas when conducting similar analyses.
		Joint strategy for heritage interpretation	Institute of the Republic of Slovenia for Nature Conservation	Representatives of the public and private tourism sectors, non-governmental organizations	Any (cross-border) rural area with natural and cultural heritage	The Joint strategy can serve as a basis for cross-border connection in the segment of interpretation approaches aimed at managing visitors and target groups of participants. The Strategy can also serve as an example of good practices when it comes to the interpretation and sustainable heritage management.
		Development of visit monitoring methodology	Institute of the Republic of Slovenia for Nature Conservation	Representatives of the public and private tourism sectors, non-governmental organizations	Any (cross-border) rural area with natural and cultural heritage	The developed monitoring methodology serves as an example of good practices when it comes to tools for user monitoring and the protection and sustainable use of natural and cultural heritage and the introduction of new environmental protection standards for visitor management. Specifically three tools have been developed: a) mobile positioning based on statistical indicators and measurable parameters of GSM triangulation methodology for evaluation of visitors/ tourists in the area, b) GPS visitor tracking methodology to analyze expectations and movement patterns in the area and c) integrated terrestrial methodology of analysis of walkability/visit patterns in key areas with the help of innovative electronic sensors.

Thematic area	Project	Capitalisation element	Responsible partner	Possible target groups for capitalisation	Possible geographical areas for capitalisation	Possible ways of capitalisation
		Action plan for establishing a production platform	Maribor-Pohorje Tourist Board	Representatives of the public and private tourism sectors, non-governmental organizations	Any (cross-border) rural area with natural and cultural heritage	The Action plan alongside the analysis of the tourist offer and the potential for the development of attractive tourist products, contains guidelines for the design of the cross-border tourist product ENJOYHERITAGE, the content design of the production platform, the vertical content basis for the design of tourist programs and a set of measures for market communication which can be useful to other actors that wish to do the similar thing in their respective area.
Heritage-based tourism	DETOX	Database with descriptions of ethnological heritage	University of Maribor, Faculty of Electrical Engineering and Computer Science	Museums, local and regional authorities, members of the tourism sector, non-governmental organizations	Any (cross-border) area with ethnological cultural heritage	The database can serve as an example of how to categorize and describe ethnological heritage e.g. old customs
Heritage-based tourism	CLAUSTRA+	CLAUSTRA destination development guidelines	Kvarner Tourist Bord	Other cultural and touristic destinations	Any cross-border area which intends to preserve natural and cultural heritage in sustainable and archeological tourism	The document provides examples of good practice with comparative methodology, international guidelines for the preservation of natural and cultural heritage, compliance with strategic documents, examples of good practice in sustainable and archaeological tourism
		Plan for the promotion of a new cultural and touristic product	Kvarner Tourist Bord	Other cultural and touristic destinations	Any cross-border area which intends to promote a new cultural and touristic product	Promotion of a new cultural and touristic product including trends in the promotion of cultural and outdoor tourism
		Expert reports on archeological and conservation work	Institute of the protection of cultural heritage of Slovenia, Croatian Conservation Institute, Maritime and History Museum of the Croatian Littoral	Other archeological sites	Any cross-border area rich with archeological sites	"Report on the implemmted work can enable the transfer of good practice to other areas"

Thematic area	Project	Capitalisation element	Responsible partner	Possible target groups for capitalisation	Possible geographical areas for capitalisation	Possible ways of capitalisation
	MISTERION	Excavation report - for the professional public	Municipality of Kamanje	Professional public, academic community, archeologists, geologists and similar scientific fields	Any locality that stands out for its unique natural and cultural heritage	Methods transferable to other areas
		Guidelines for the inclusion of heritage in a cross-border tourism product	Kompas Novo Mesto d.o.o.	Tourism practitioners involved in development and management of sustainable tourism products in rural areas (tourism boards, destination management organisations), local and regional governments interested in tourism development	Any locality that stands out for its unique natural and cultural heritage	Basis for connecting, restoration and preservation of heritage
		Business management and marketing plan of a cross-border tourism product	Kompas Novo Mesto d.o.o.	Tourism practitioners involved in development and management of sustainable tourism products in rural areas (tourism boards, destination management organisations), local and regional governments interested in tourism development	Any locality that stands out for its unique natural and cultural heritage	Business and marketing plan of a cross-border tourism product
		Business plan for the development of a social enterprise	Vallis Colapis Local Action Group	Any other rural destination seeking for alternative models of managing the cross-border tourism offer	Any locality that stands out for its unique natural and cultural heritage	Business plan - example of an alternative model of managing the cross-border tourism offer aimed at the sustainable use of local resources and the marketing of the cross border tourist product Misterion
Heritage-based tourism	KRASn'KRŠ	Methodology for the identification of hotspots of natural and cultural heritage	Natural History Museum Rijeka	Representatives of the tourism sector, researchers, representatives of the academic community dealing with natural and cultural heritage, local population, professional public	Any locality rich with geoheritage, bioheritage and cultural heritage	Methodology for evaluating hotspots of karst heritage, divided into geoheritage, bioheritage and cultural heritage

Thematic area	Project	Capitalisation element	Responsible partner	Possible target groups for capitalisation	Possible geographical areas for capitalisation	Possible ways of capitalisation
		Interpretation strategy of karst heritage	Natural History Museum Rijeka	Representatives of the tourism sector, researchers, representatives of the academic community dealing with natural and cultural heritage, local population, professional public	Other carst area such as Dinaric Karst, Central Massif in France, Gargano in Italy, Agtelek cross-border karst between Hungary and Slovakia	Interpretation strategy of karst heritage with methods and tools for presenting natural and cultural heritage of the karst landscapes
		Handbook for heritage interpretation	Research Center of the Slovenian Academy of Sciences and Arts	Representatives of the tourism sector, researchers, representatives of the academic community dealing with natural and cultural heritage, public institutions managing natural and cultural sites	Any tourist locality rich on karst	The concept of interpretation at three levels was developed: interpretation centres (ICs), polygons (IPs) and hotspots
		Cross-border study of good practices	Institute of Sustainable Tourism Factory, Ljubljana	Tourist boards of municipalities and cities, regional and local authorities	Any tourist locality rich on karst	Good practices on tourism product development in similar landscapes in Europe
		Cross-border sustainable destination concept	Institute of Sustainable Tourism Factory, Ljubljana	Tourist boards of municipalities and cities, regional and local authorities	Any tourist locality rich on karst	CB concept for elaboration and marketing of unique tourist products (concept of connecting space and content)
Heritage-based tourism	Uživam tradicijo	Heritage interpreter program	Grm Novo mesto - center of biotechnology and tourism	Educational institutions, business support organisations, local action groups	Any heritage locality	Formal and informal education programmes developed on the topics of cultural and natural heritage (focus on culinary tradition, customs and habits), presentation, promotion and marketing of products. Programmes are aimed at pupils/students but also tourism providers
		Report on the establishment of heritage communities	Grm Novo mesto - center of biotechnology and tourism	Stakeholders directly involved in the development and provision of (new) tourism products in rural areas (tourism boards, destination management organisations)	Any heritage locality	Methodology of establishing heritage communities and their model of work transferable to other communities

Thematic area	Project	Capitalisation element	Responsible partner	Possible target groups for capitalisation	Possible geographical areas for capitalisation	Possible ways of capitalisation
Heritage-based tourism		Joint strategy of culinary transversal	Public institution "Žumberak Nature Park - Samoborsko gorje"	Stakeholders directly involved in the development and provision of (new) tourism products in rural areas (tourism boards, destination management organisations)	Any heritage locality	Innovative and focused way of preparation of tourism offer based on culinary heritage, customs and crafts
		Guide to activating heritage communities	Public institution "Žumberak Nature Park - Samoborsko gorje"	Other local authorities that can form a heritage community in their territory	Any heritage locality	Guide elaborates on the purpose of establishing heritage communities, ways of connecting into heritage community, their cooperation with other stakeholders, innovative practices and smart technologies in heritage presentation etc.
	PREHISTORY ADVENTURE	"Database for the interpretation"	Turopolje Museum, Archaeological Museum in Zagreb, Municipality of Donja Voća, Municipality of Radenci and Zreče	Tourist boards, archaeological sites	Archaeological sites, entities that need the modernization of cultural or historical heritage (public institutions, for example)	Cross-border database on the prehistoric heritage of the partner area with data used to prepare content for interpretation in the form of augmented reality
		The taste of the prehistoric Zreče	Municipality of Zreče in cooperation with the Faculty of Philosophy in Ljubljana	Hospitality industry in the project area	Archaeological sites, entities that need the modernization of cultural or historical heritage (public institutions, for example)	Preserving the heritage of historical times, at the same time adapting to modern times (Menu and traditional food in this case)
		Catalogue of the Prehistory Adventure Project	Archaeological Museum in Zagreb	Tourist boards, archaeological sites, archeology students	Archaeological sites, entities that need the modernization of cultural or historical heritage (public institutions, for example)	Collected texts of project partners that represent the archaeological cultural heritage of the program areas

Thematic area	Project	Capitalisation element	Responsible partner	Possible target groups for capitalisation	Possible geographical areas for capitalisation	Possible ways of capitalisation
Biodiversity and nature protection	ČIGRA	Cross-border monitoring protocol	Croatian Academy of Sciences and Arts	Public institutions for nature protection, national authorities in the area of nature protection, academic community (researchers, professors and students), non-governmental organizations dealing with nature protection	(Natura 2000 ecological network) areas that are important for the conservation status improvement of target species	The approach can be applied to other areas for related species and for different kinds of monitoring (guidelines for different levels of monitoring have been developed as well)
		Database on the status of tern populations	Croatian Academy of Sciences and Arts	Public institutions for nature protection, national authorities in the area of nature protection, academic community (researchers, professors and students), non-governmental organizations dealing with nature protection	(Natura 2000 ecological network) areas that are important for the conservation status improvement of target species	The database can be used as an example for the monitoring of other bird species.
		Data on bird movements entered in MoveBank	Croatian Academy of Sciences and Arts	Public institutions for nature protection, national authorities in the area of nature protection, academic community (researchers, professors and students), non-governmental organizations dealing with nature protection	(Natura 2000 ecological network) areas that are important for the conservation status improvement of target species	The data can be used for further research on the international level.
		Scientific paper and reports - movement of terns	Croatian Academy of Sciences and Arts	Public institutions for nature protection, national authorities in the area of nature protection, academic community (researchers, professors and students), non-governmental organizations dealing with nature protection	(Natura 2000 ecological network) areas that are important for the conservation status improvement of target species	The data can be used for further research.
		Scientific paper and reports - genetics	Croatian Academy of Sciences and Arts	Public institutions for nature protection, national authorities in the area of nature protection, academic community (researchers, professors and students), non-governmental organizations dealing with nature protection	(Natura 2000 ecological network) areas that are important for the conservation status improvement of target species	The data can be used for further research.
		Draft cross-border action plan for the protection of terns	Croatian Academy of Sciences and Arts	Public institutions for nature protection, national authorities in the area of nature protection, academic community (researchers, professors and students), non-governmental organizations dealing with nature protection	(Natura 2000 ecological network) areas that are important for the conservation status improvement of target species	Transferable to other river basins (e.g. Sava and Drava) where terns are nesting, basis for Management plans of Natura 2000 areas

Thematic area	Project	Capitalisation element	Responsible partner	Possible target groups for capitalisation	Possible geographical areas for capitalisation	Possible ways of capitalisation
Biodiversity and nature protection	LIKE	Guidelines for joint management	The Institute of the Republic of Slovenia for Nature Conservation	Public institutions for nature protection, national authorities in the area of nature protection, non-governmental organizations	Any karst edge area visited by recreationists and where tourism is developing.	The data can be used for the guidelines development of future projects.
		Expert base proposal for the Ćićarija regional park	Region of Istria	Public institutions for nature protection, national authorities in the area of nature protection, non-governmental organizations	Any karst edge area visited by recreationists and where tourism is developing.	Expert base proposal can be used for further research of this regional park.
		Report on outdoor recreation legislation	The Institute of the Republic of Slovenia for Nature Conservation	Public institutions for nature protection, national authorities in the area of nature protection, non-governmental organizations, local population, recreationists	Any karst edge area visited by recreationists and where tourism is developing.	Sports activities are regulated in the area of the karst edge; The approach can be applied to other areas of the karst edge that are visited by recreationists and where tourism is developing.
		Report on Developmental Aspects of Recreation	The Institute of the Republic of Slovenia for Nature Conservation	Public institutions for nature protection, national authorities in the area of nature protection, non-governmental organizations, local population, recreationists	Any karst edge area visited by recreationists and where tourism is developing.	Sports activities are regulated in the area of the karst edge; The approach can be applied to other areas of the karst edge where tourism is developing.
		Report on recreation in Osp and Črno Kal	The Institute of the Republic of Slovenia for Nature Conservation	Public institutions for nature protection, national authorities in the area of nature protection, non-governmental organizations, local population, recreationists	Any karst edge area visited by recreationists and where tourism is developing.	The approach can be applied to other areas of the karst edge where tourism is developing.
		Study on recreation on the karst edge	The Institute of the Republic of Slovenia for Nature Conservation	Public institutions for nature protection, national authorities in the area of nature protection, non-governmental organizations	Any karst edge area visited by recreationists and where tourism is developing.	The data can be used for future research and the guidelines amendments for recreation management of the karst edge area in accordance with the needs of nature protection that requires certain restrictions and prohibitions.

Thematic area	Project	Capitalisation element	Responsible partner	Possible target groups for capitalisation	Possible geographical areas for capitalisation	Possible ways of capitalisation
	LIKE	Georeferenced sites of <i>Serratula lycopifolia</i>	University of Primorska	Academic community (researchers, professors, students), public institutions for nature protection, national authorities in the area of nature protection, non-governmental organizations	Any karst edge area visited by recreationists and where tourism is developing.	Accurate spatial recording of individual specimens (clones) of this species is important for its subsequent monitoring. The approach can be applied to other areas for related species.
		Evaluation of the current monitoring plan for <i>Serratula lycopifolia</i>	University of Primorska	Public institutions for nature protection, national authorities in the area of nature protection, non-governmental organizations, local and regional authorities	Any karst edge area visited by recreationists and where tourism is developing.	In nature protection - the basis for further protection and management of species in the entire area.
		Study on the habitat ecology of <i>Serratula lycopifolia</i>	University of Primorska	Public institutions for nature protection, national authorities in the area of nature protection, academic community (researchers, professors, students), local and regional authorities, non-governmental organization	Any karst edge area visited by recreationists and where tourism is developing.	Scientific knowledge of the species, obtaining new information
		Study on the biological quality of the <i>Serratula lycopifolia</i> habitat	University of Primorska	Public institutions for nature protection, national authorities in the area of nature protection, academic community (researchers, professors, students), local and regional authorities, non-governmental organization	Any karst edge area visited by recreationists and where tourism is developing.	The approach can be applied to other areas for related species.
		Proposal of a management plan for <i>Emberiza hortulana</i>	University of Primorska	Public institutions for nature protection, national authorities in the area of nature protection, local and regional authorities, foresters, farmers, general public	Any karst edge area visited by recreationists and where tourism is developing.	The management plan can be used as a concrete document in planning the activities of stakeholders who have an impact on the species (e.g. foresters and farmers) and also in development or update of management plans for Natura 2000 ecological network areas.

	LIKE	Determining the genetic structure of the Tommasini's meringue species	DOPPS – BirdLife Slovenia	Academic community, public institutions for nature protection	Any karst edge area visited by recreationists and where tourism is developing.	Key to understanding the type and conservation status, in order to capitalize in the context of far-reaching activities in the project area. The approach can be applied to other areas for related species. Geomarkers - similar activities can be repeated in other geographical areas.
		Monitoring plan for the Tommasini's meringue species	DOPPS – BirdLife Slovenia	Public institutions for nature protection, national authorities in the area of nature protection, academic community (researchers, professors, students), local and regional authorities, non-governmental organization	Any karst edge area visited by recreationists and where tourism is developing.	The obtained data are a prerequisite for a proper and effective selection of further protection measures.
		Cross-border management plan for the Tommasini's meringue species	DOPPS – BirdLife Slovenia	Public institutions for nature protection, national authorities in the area of nature protection, local and regional authorities, foresters, farmers, employees of the nature protection system, the general public	Any karst edge area visited by recreationists and where tourism is developing.	The Cross-border management plan offers guidelines for permanent management and conservation measures that could be implemented in other cross-border areas.
		Research on the impact of climbing on birds	DOPPS – BirdLife Slovenia	Public institutions for nature protection, national authorities in the area of nature protection, academic community (researchers, professors, students), local and regional authorities, non-governmental organization	Any karst edge area visited by recreationists and where tourism is developing.	A similar problem throughout the Mediterranean area, therefore, the research methodology and results can be transferred to such area.
		Bird feedlot monitoring plan	Association BIOM	Public institutions for nature protection, national authorities in the area of nature protection, academic community (researchers, professors, students), non-governmental organization	Any karst edge area visited by recreationists and where tourism is developing.	Based on an example of good practice, the methodology of the project area has been developed; it can be transferred

Thematic area	Project	Capitalisation element	Responsible partner	Possible target groups for capitalisation	Possible geographical areas for capitalisation	Possible ways of capitalisation
		Program for the inclusion of volunteers in monitoring	Association BIOM	Higher education institutions, NGOs	Any karst edge area visited by recreationists and where tourism is developing.	The transfer of good practice from Slovenia has the potential to be transferred to any area where monitoring is necessary.
		Study on the impact of free flight on griffon vultures (<i>Gyps fulvus</i>)	Association BIOM	Paragliders, visitors and users of protected areas	Any karst edge area visited by recreationists and where tourism is developing.	This study can be a concrete initial data and material for development of the project area joint management.
Biodiversity and nature protection	VEZI NARAVE	Expert base for otter management	Institute of the Republic of Slovenia for Nature Conservation	Non-governmental organizations and academic community (researchers, professors and students)	(Natura 2000 ecological network) areas that are important for the conservation status improvement of target species.	Expert base and guidelines can help others for otter management in general and transboundary otter management. The data can be used for further planning of measures for that species.
		Management guidelines - Radensko polje	Institute of the Republic of Slovenia for Nature Conservation	Non-governmental organizations and academic community (researchers, professors and students)	(Natura 2000 ecological network) areas that are important for the conservation status improvement of target species.	The guidelines can be used for development of a management plan for the marsh fritillary species and for taking new measures for the conservation of this species in the future.
		Management guidelines – Sutla and Risnjak	Association Hyla	Non-governmental organizations and academic community (researchers, professors and students)	(Natura 2000 ecological network) areas that are important for the conservation status improvement of target species.	The guidelines can be used to conduct future research and develop new guidelines for the marsh fritillary species.
Biodiversity and nature protection	Carnivora Dinarica	Report on harmonization of wolf and lynx management	University of Zagreb, Faculty of Veterinary Medicine	National authorities in the area of nature protection, public institutions for nature protection, the academic community (researchers, professors and students) and non-governmental organizations	(Natura 2000 ecological network) areas that are important for maintaining a stable populations and improving the conservation status of large carnivores.	This report can be used in the revision of the Action Plan for the wolf population management, the establishment of the practice of domestic animals protection in the Alps (LIFE WolfAlps EU), the development of protocols for issuing exceptional decisions and the answer to the issue of bold wolves (LIFE BOLD WOLVES).

Thematic area	Project	Capitalisation element	Responsible partner	Possible target groups for capitalisation	Possible geographical areas for capitalisation	Possible ways of capitalisation
	Carnivora Dinarica	Large carnivores walkability and connectivity research	University of Zagreb, Faculty of Veterinary Medicine	The academic community (researchers, professors and students), public institutions for nature protection and non-governmental organizations	(Natura 2000 ecological network) areas that are important for maintaining a stable populations and improving the conservation status of large carnivores.	This report can help in further research on the connection of large carnivore populations between Croatia and Slovenia, as well as in research on the permeability of the border area for large carnivores.
		Popular research publication	WWF Adria	The academic community (researchers, professors and students), local and regional authorities on whose territory large carnivores are found, non-governmental organizations, public nature protection institutions	(Natura 2000 ecological network) areas that are important for maintaining a stable populations and improving the conservation status of large carnivores.	This publication can be used as an example for development of future projects publications, but also as a summary for further research.
		Large carnivores ecosystem services research	University of Zagreb, Faculty of Veterinary Medicine	The academic community (researchers, professors and students), local and regional authorities on whose territory large carnivores are found, non-governmental organizations, public nature protection institutions	(Natura 2000 ecological network) areas that are important for maintaining a stable populations and improving the conservation status of large carnivores.	This enables further research activities especially in the sense of interdisciplinarity, i.e. the participation of biological, ethnological and other professions.
		Popular publication on the ecosystem services of large carnivores	WWF Adria	The academic community (researchers, professors and students), local and regional authorities on whose territory large carnivores are found, non-governmental organizations, key institutional stakeholders and other mediators/ambassadors of large carnivores	(Natura 2000 ecological network) areas that are important for maintaining a stable populations and improving the conservation status of large carnivores.	This publication can be used as an example for development of future projects publications, but also as a summary for further research.

	Carnivora Dinarica	Farm of good practice examples of coexistence between people and large carnivores	Slovenia Forest Service	National authorities (ministries of agriculture)	(Natura 2000 ecological network) areas that are important for maintaining a stable populations and improving the conservation status of large carnivores.	Recommendations for further work in the field of property protection using high electric fences - networks and cooperation with agricultural holdings that can contribute to the promotion of effective approaches to property protection. Experiences gained in working with good farm owners will help improve understanding of the role of effective protection methods and encourage cooperation between different institutions in finding solutions for coexistence with large carnivores.
		Protective fences at 'hot spots'	Slovenia Forest Service	National authorities (ministries of agriculture)	(Natura 2000 ecological network) areas that are important for maintaining a stable populations and improving the conservation status of large carnivores.	The report provides recommendations for the transfer of good practice of large carnivores conservation through protective fences at "hot spots"
		Active traffic signalization system report	Slovenia Forest Service	National public institutions for nature protection	(Natura 2000 ecological network) areas that are important for maintaining a stable populations and improving the conservation status of large carnivores.	An example of good practice of active traffic signalization system can be transferred to road sections where a large number of wild animals get injured.
